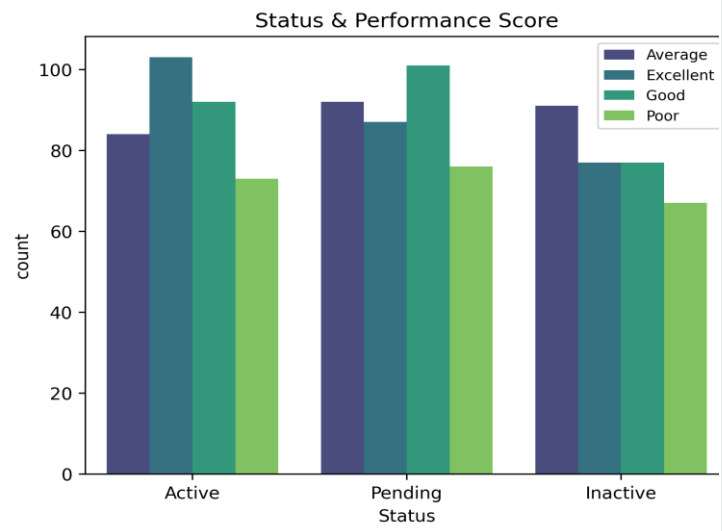
HR Workforce Analysis

Visualizations & Plot Descriptions

Haider B. | Python, Pandas, Matplotlib, Seaborn | 2026

[Attrition Analysis]

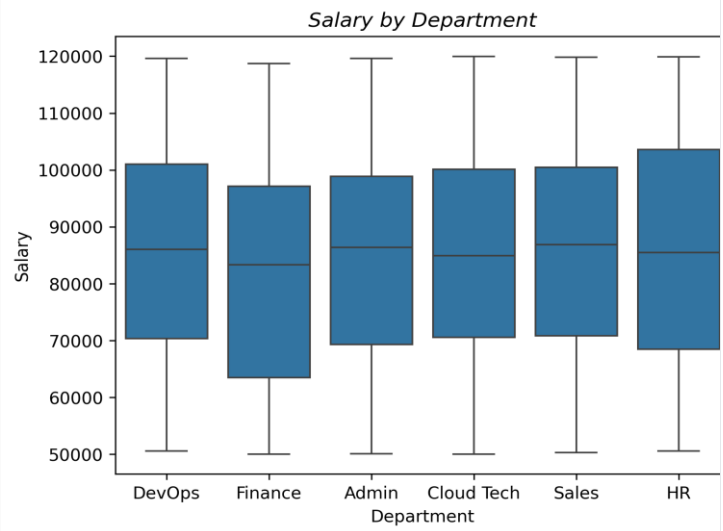
Fig 1. Status & Performance Score



> *Low performers account for the majority of resignees. High performers show a large active-to-inactive gap — the workforce is retaining its best talent, for now.*

[Compensation Analysis]

Fig 2. Salary by Department



> *Finance and HR show the widest salary variance, suggesting inconsistent pay structures. IT and DevOps are more tightly distributed.*

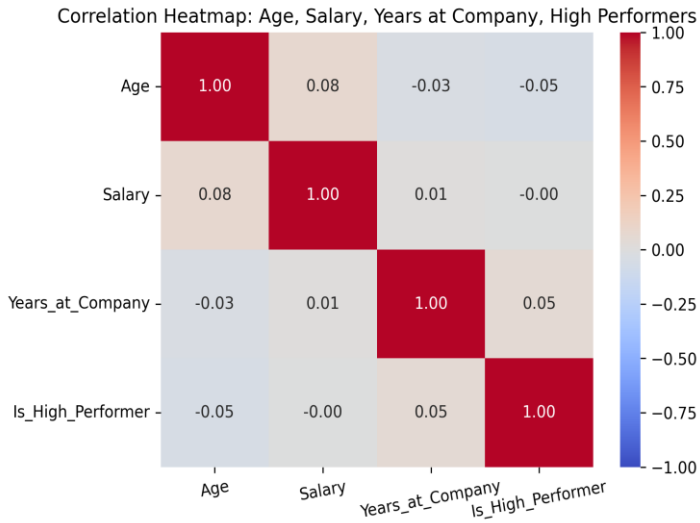
[Compensation Analysis]

Fig 3. Salary by Performance Score

> *Salary bands overlap heavily across all performance levels — Excellent performers are not paid more than Poor ones. Salary is disconnected from performance.*

[Statistical Overview]

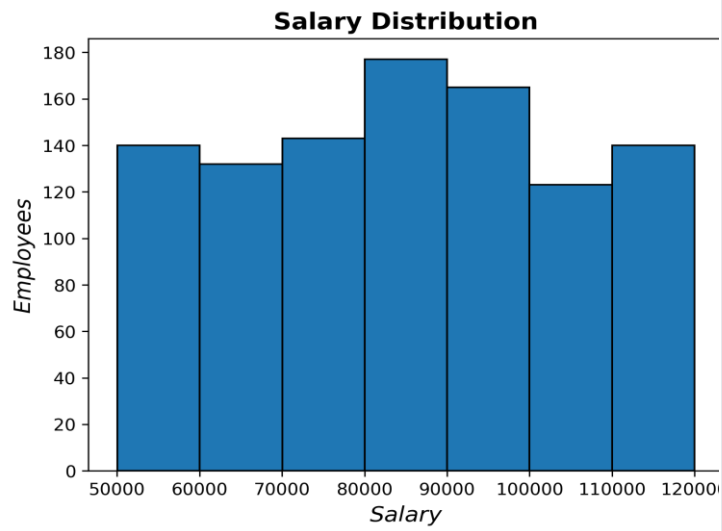
Fig 4. Correlation Heatmap



> *No strong correlations between Age, Salary, Tenure, or Performance. Compensation is not driven by experience or seniority in this workforce.*

[Compensation Analysis]

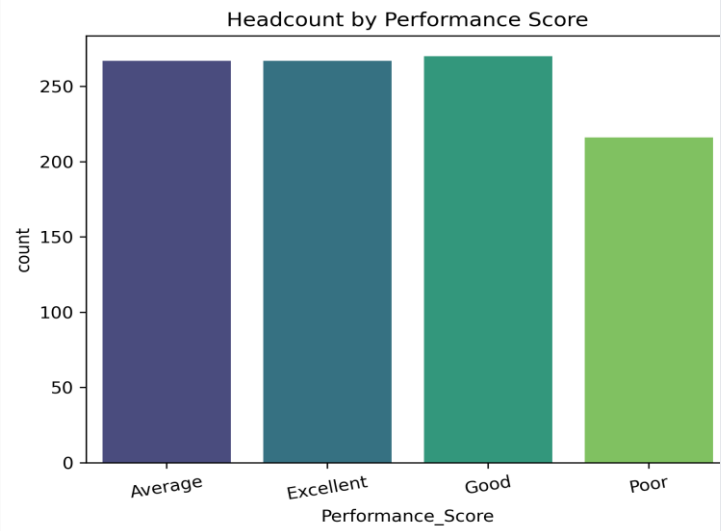
Fig 5. Salary Distribution



> *Salary is roughly uniformly distributed with no sharp peak, indicating inconsistent or ad-hoc compensation decisions across the company.*

[Performance Analysis]

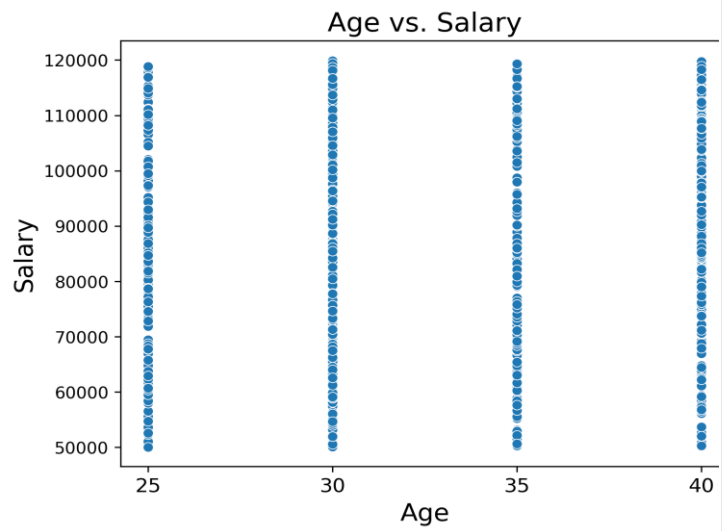
Fig 6. Headcount by Performance Score



> *The workforce skews toward Average and Good ratings. Excellent employees are a minority — making their retention critically important.*

[Workforce Structure]

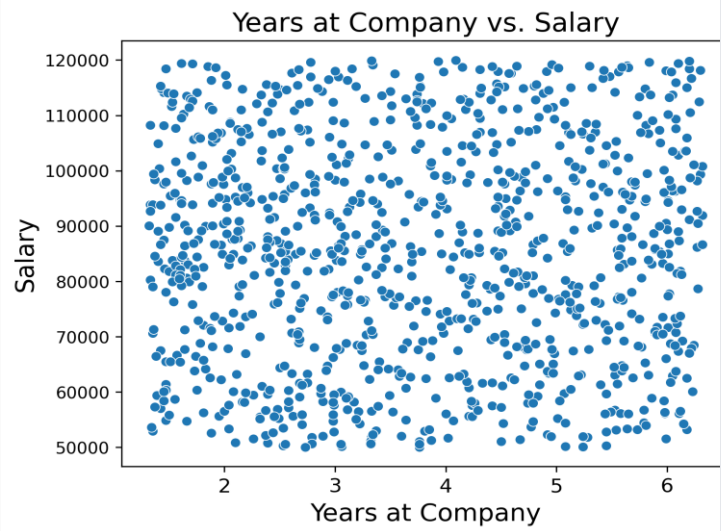
Fig 7. Age vs. Salary



> *No upward trend — employees of the same age earn vastly different salaries. Age alone is not a predictor of compensation.*

[Compensation Analysis]

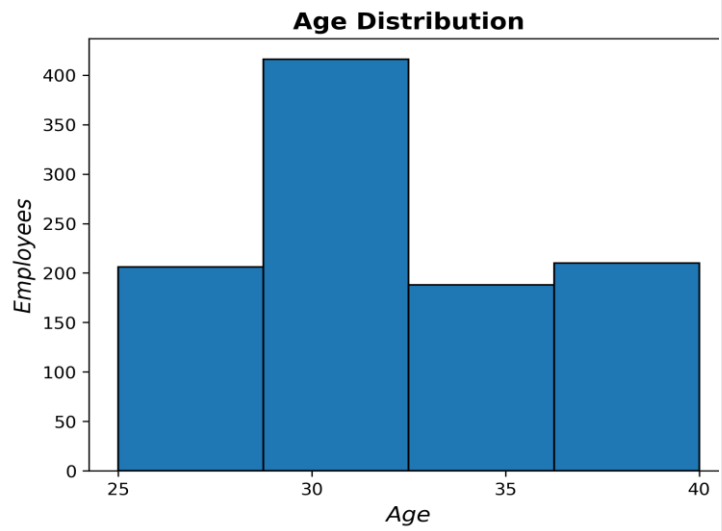
Fig 8. Years at Company vs. Salary



> *Salary remains scattered across all tenure levels with no progression. Employees with 10+ years earn the same as new hires — a promotion stagnation signal.*

[Workforce Structure]

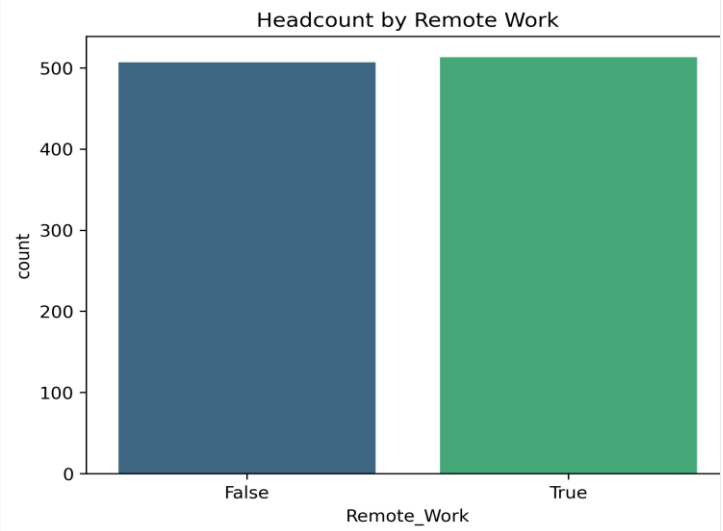
Fig 9. Age Distribution



> *Workforce is heavily concentrated around age 30. This uniformity risks a simultaneous retirement wave if hiring diversity is not addressed.*

[Workforce Structure]

Fig 10. Headcount by Remote Work



> *Remote and on-site headcounts are nearly equal. Since performance is identical across both groups, remote work is a viable no-cost retention policy.*
